DAMA Management Body of Knowledge
City of Edmonton

The business challenge: Open Data

Leveraging the DMBOK: The Analytics Centre of Excellence, City of Edmonton has demonstrated leadership in many areas referenced in the DAMA DMBOK (Data Governance, Data Operations Management, Data Security Management, Reference and Master Data Management, Meta-data Management and Data Quality Management). Additionally, the Business Technology Strategy (BTS), which guides their work every day, embodies many of the Data Management Principles found in the DAMA DMBOK. For example, one of BTS’s Strategic Pillars is Useable Information — “the City of Edmonton will continue to enable more strategic, community-based decision-making by providing data and information to all stakeholders and ensuring these stakeholders have the tools and knowledge to perform meaningful analysis.” This Pillar has supported ACE’s work done on CoE’s Internal Business Catalogue (IBAC), which exemplifies the Principles “Data management requires an enterprise perspective” and “Data management is lifecycle management” and is the impetus for “Managing data means managing the quality of data” and “It takes Metadata to manage data.”

Who
Analytics Centre of Excellence
Edmonton, Canada

What
Leveraged DAMA DMBOK to create a set of Strategic Pillars to create alignment in the delivery of data to support work for the community

Why
This team delivers services to an entire community, and has made segments of their data open and available.
